Table of Contents	vi
List of Tables	ix
List of Figures	xi
Chapter 1: Introduction	1
1.1 Background	1
1.1.1 Photoplethysmography (PPG) and Remote PPG	1
1.1.2 Electrocardiogram (ECG) and Its Physiological and Signal Relation With PPG	4
1.1.3 Digital Twins	7
1.1.4 Blood Oxygen Saturation	9
1.2 Main Contributions	11
1.2.1 Cross-domain Joint Dictionary Learning for ECG Inference from PPG	12
1.2.2 Never-Miss-A-Beat: A Physiological Digital Twins Framework for Cardiovascular Health	13
1.2.3 Noncontact Hand Video Based SpO ₂ Monitoring Using Smartphone Cameras	14
Chapter 2: Cross-domain Joint Dictionary Learning for ECG Inference from PPG	16
2.1 Motivation and Problem Formulation	16
2.2 Related Work	19
2.2.1 ECG reconstruction from PPG	19
2.2.2 Dictionary learning	20
2.3 Proposed Methods	21
2.3.1 Signal Preprocessing	22
2.3.2 Cross-domain Joint Dictionary Learning (XDJDL)	24
2.3.3 Label Consistent XDJDL (LC-XDJDL)	29
2.4 Experimental Evaluation	32
2.4.1 Dataset	32
2.4.2 Metrics for Evaluation	33

2.4.3	Overall Morphological Reconstruction	35
2.4.4	Subwave Morphological Reconstruction	39
2.4.5	Time Interval Recovery	42
2.5	Discussions	43
2.5.1	Result Using PPG-based Segmentation Scheme	43
2.5.2	Evaluation on the Capnabase TBME-RR Dataset	45
2.5.3	Feasibility Analysis of The Proposed Method for The Internet-of-Healthcare-Things (IoHT)	46
2.5.4	Limitations of The Proposed Method	49
2.5.5	Future Work Towards Explainable AI	54
2.6	Chapter Summary	55
Chapter 3:	Never-Miss-A-Beat: A Physiological Digital Twins Framework for Cardiovascular Health	56
3.1	Digital Twins Relating PPG and ECG Sensing: Motivation and Problem Formulation	56
3.2	Related Background	58
3.3	Methodology	59
3.3.1	Backbone Model for ECG Inference from PPG	59
3.3.2	Transfer Learning for Building Precision Healthcare Digital Twins	61
3.3.3	Testing Modes for ECG Inference	64
3.4	Experimental Results Using XDJDL as The Backbone For The Personalized Digital Twin Model	66
3.4.1	Dataset	66
3.4.2	Hyperparameters Selection	67
3.4.3	Performance of ECG Inference	69
3.5	Discussions for XDJDL-based Personalized Digital Twin Model	76
3.5.1	Results Based on PPG Segmentation Scheme	76
3.5.2	Performance Evaluation for Long Time Scale Data	78
3.6	Using Neural Networks as The Backbone for ECG Inference from PPG to Build Digital Twins	84
3.6.1	A Retrospect: The Physiological Process Behind PPG and ECG Generation	84
3.6.2	Conditional Variational Autoencoder (CVAE) for PPG-to-ECG Inference	86
3.6.3	Transfer Learning to Build Personalized Digital Twin for Cardiovascular Monitoring	88
3.7	Incorporating Causality into CVAE Model Based on Structural Causal Model (SCM)	91
3.7.1	Importance of Incorporating Causality into Machine Learning Algorithms and Structural Causal Model	92
3.7.2	<i>Causal CVAE</i> Model for PPG-to-ECG Inference	95
3.7.3	ECG Reconstruction Performance of Personalized Digital Twins	97
3.7.4	Intervention Experiment	98
3.8	Chapter Summary	105

Chapter 4:	A Multi-Channel Ratio-of-Ratios Method for Noncontact Hand Video Based SpO ₂ Monitoring Using Smartphone Cameras	107
4.1	Related Work	107
4.1.1	Contact-based SpO ₂ measurement using smart devices	107
4.1.2	Noncontact SpO ₂ measurement using cameras	108
4.2	Ratio-of-ratios (RoR) Model for Noncontact SpO ₂ Measurement	110
4.3	Proposed Multi-Channel RoR Method	113
4.3.1	ROI Localization and Spatial Combining	114
4.3.2	rPPG Extraction and HR Estimation	114
4.3.3	Feature Extraction	116
4.3.4	Regression and Postprocessing	117
4.4	Experimental Results	118
4.4.1	Data Collection	118
4.4.2	Performance Metrics	122
4.4.3	Results From Proposed Algorithm	122
4.4.4	Ablation Study of Proposed Pipeline	127
4.4.5	Leave-One-Out Experiments	130
4.5	Discussions	132
4.5.1	Performance on Contact SpO ₂ Monitoring	132
4.5.2	Resilience Against Blurring	133
4.5.3	Limitations and Further Verification with Intermittent Hypoxia Protocols	135
4.6	Chapter Summary	142
Chapter 5:	Optophysiological Model Guided Neural Networks for Contactless Blood Oxygen Estimation From Hand Videos	144
5.1	Introduction	144
5.2	Proposed Optophysiology-Guided Neural Network Method for Estim- ating SpO ₂ From Videos	146
5.2.1	Extraction of Skin Color Signals	146
5.2.2	Neural Network Architectures	148
5.3	Experimental Results	152
5.3.1	Dataset and Capturing Conditions	152
5.3.2	Participant-Specific Results	154
5.3.3	Leave-One-Participant-Out Results	160
5.3.4	Ablation Studies	163
5.4	Discussions	164
5.4.1	Contact-based Dataset Testing	164
5.4.2	Ability to Track SpO ₂ Change	165
5.4.3	Visualizations of RGB Combination Weights	166
5.5	Chapter Summary	169
Chapter 6:	Conclusions and Future Perspectives	171
	Bibliography	174
